# Rubica Cybersecurity
Modern Employee Benefits for your Remote Team

Ready to distinguish your employee benefits and offer something your team actually needs?

With the shift to remote work, your home is also your office, making cybersecurity a must-have both personally and professionally. Bean bags and nerf guns are part of yesterday's office. Instead, offer **Rubica Cybersecurity** to your employees and their families.

When it comes to protecting our remote workforce, there is conflict between the need for security and the need for privacy in our personal world. People don't want their employer to monitor what they do or where they browse on their personal time or on their personal devices. Because it's impossible to perfectly separate our work and personal lives, we must protect both.

Rubica is advanced security that can be used in both our personal and business stratospheres. It is specifically built for usability, personal privacy, and mobility. With Rubica, you don't have to choose between advanced security and personal privacy. We ensure advanced threat protection for your company that's easy to use, protects personal browsing, and is compatible with how people use their devices and engage with their digital world.

"We were offering LifeLock as an employee benefit. When we realized we could offer REAL security for the same price. Swapping out LifeLock for Rubica was a no brainer."

President of large insurance company

✅ **Benefits for employees**
- Peace of mind with protection from 52 categories of threats
- Secures any phone, tablet, or computer running iOS, Android, Mac, or Windows

✅ **Benefits for employers**
- Robust cybersecurity that employees will actually use
- No extra work for your IT team
- Advanced endpoint & network-layer protection for all devices outside of the office
- Easy to manage – no integrations, hardware, or handholding needed
- No hassle pricing - $10/user/month

Testimonials

"Remote work dramatically extends our threat perimeter. Offering Rubica Cybersecurity to not just employees, but their families, is a huge security win for the company. And with Rubica as an employee benefit, our IT team saved time and money. A win-win-win!"

CISO of financial firm

"We want to offer employee benefits that people actually want right now. Rubica is so easy to use that we have a really high adoption rate. Our employees love that they can protect their kids (which protects them and us too)."

Benefits Administrator of tech company

About Rubica cybersecurity protection

- Encrypts your internet connection for cellular & wifi networks

- Masks your location so you browse anonymously on a private IP address

- Remediate threats and alerts using clear instructions with our experts on-call to help

- Blocks phishing, unsafe IP addresses, insecure websites & malicious URLs

- Blocks malware, viruses, harmful downloads & mobile app threats

- Emerging threat detection via anomaly & behavioral analysis, by human cyber experts

Why Rubica?

Simple

We designed our mobile security app for ease of use. It's easy to install, intuitive, and it does its job. Built for even non-technical users.

Effective

Rubica catches 93% of malware that antivirus misses. Our secure VPN tunnel & built-in threat blocking tools protect all your devices, connections, and other online data.

Comprehensive

Rubica secures all employee computers, laptops, tablets, and phones, including personal devices. Compatible with iOS, Android, Windows, and MacOS.

Private

We maintain end-user privacy so that employees keep security turned on... even executives. Admins can see threat remediation instructions, but will never see the user's history or what the user was doing when the threat occurred. We protect both privacy and security for all users.

Affordable

Enterprise-grade protection including VPN, intrusion detection and prevention (IDS/IPS), DNS threat lists, and security incident management (SIEM/SOAR) at a fraction of the cost. No hidden fees for staff, servers, support, or maintenance.
